-  **How to see Report**

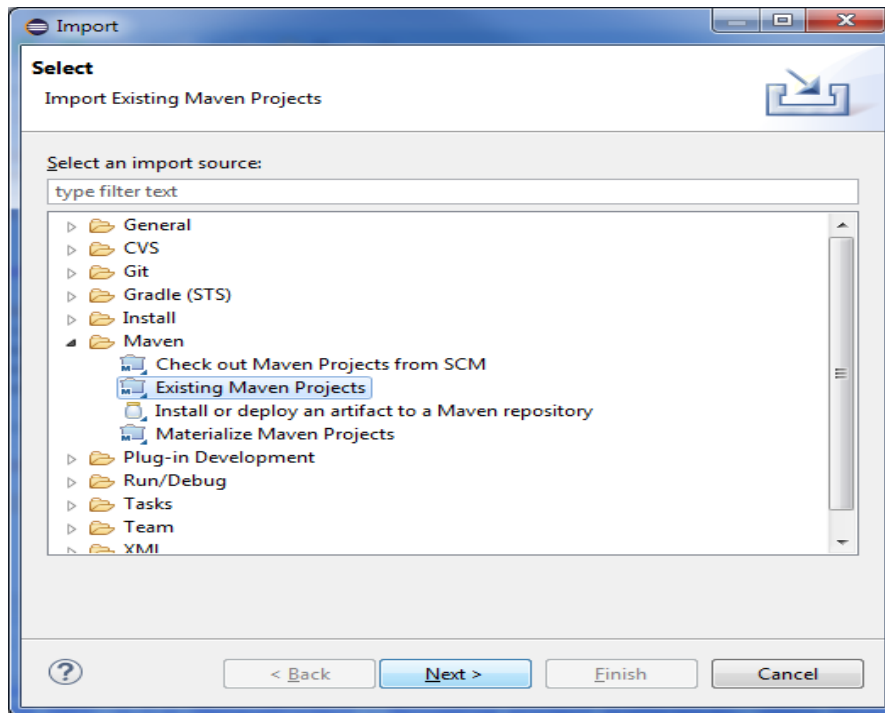

Importing Cucumber-Serenity Project

Instructions to setup project in your local:

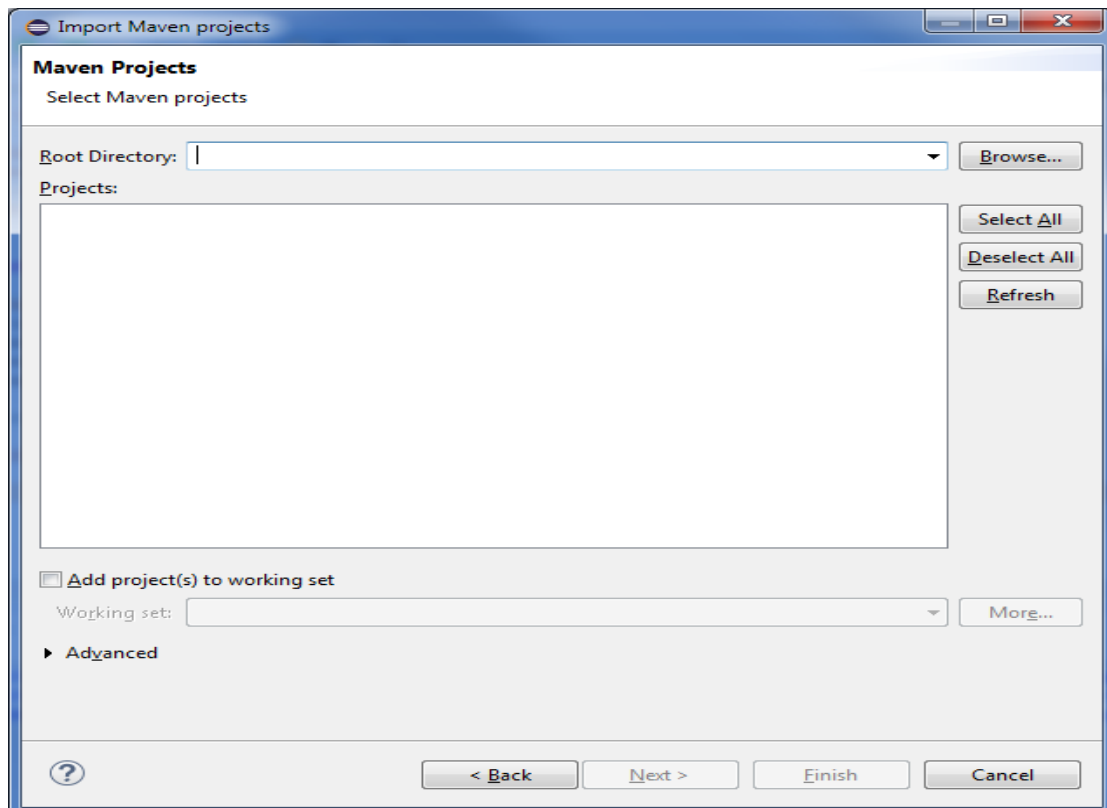

- 1) Download the project(Cucumber-Serenity) to your local.
- 2) Right click on this project -> Win Zip -> Extract To Here
- 3) Open your Eclipse/STS -> File -> Import. Then small popup window will open

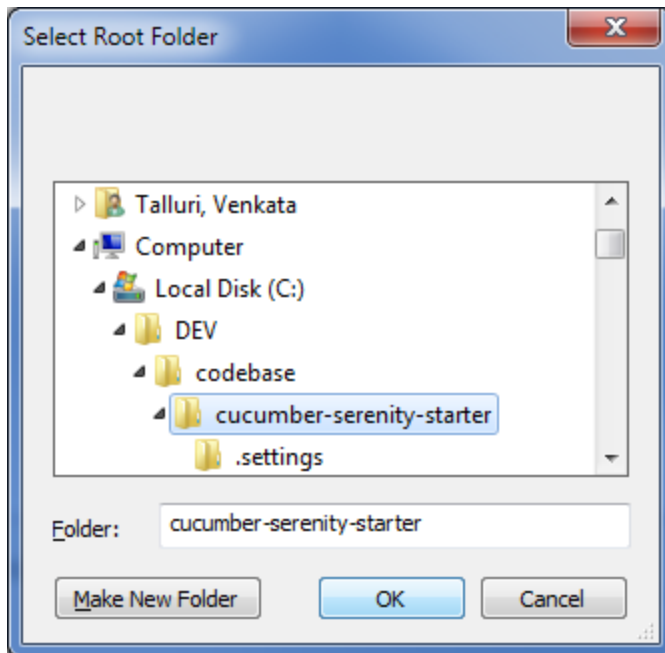

- 4) Then Select Existing maven Projects -> Next -> Browse

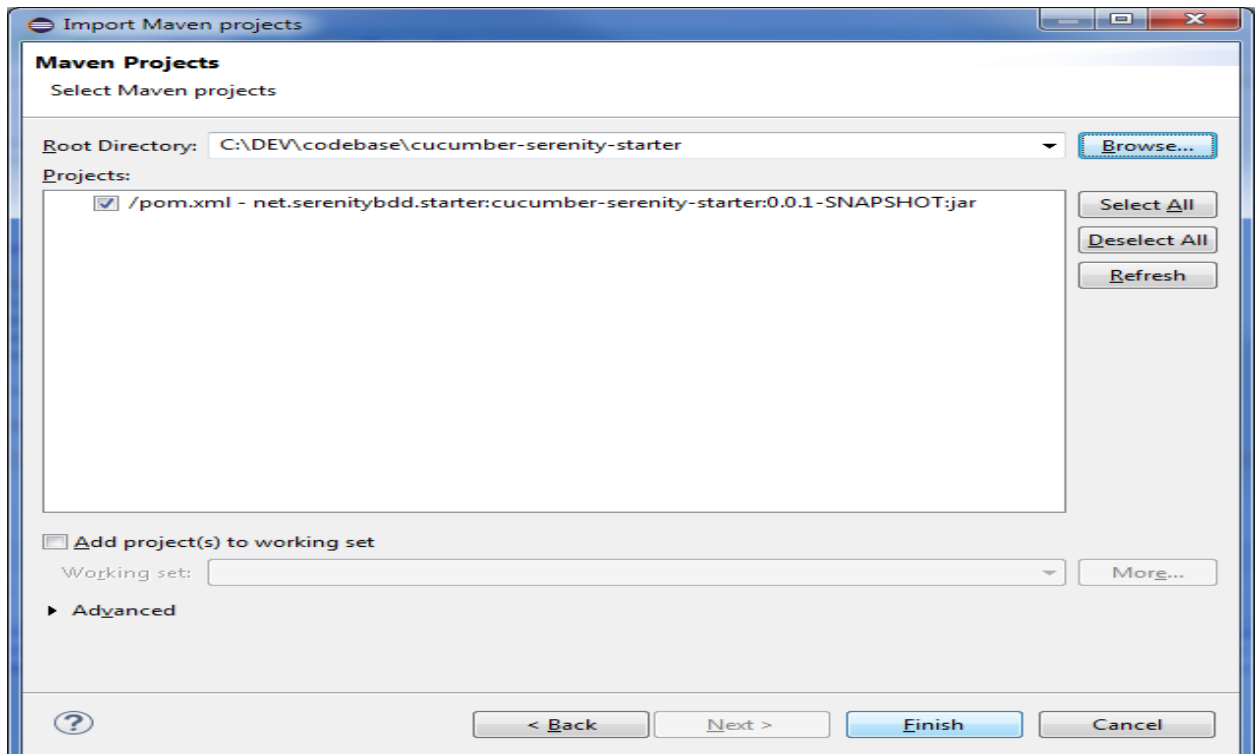

5) Select your project in the select Root Folder popup Window and click ok.

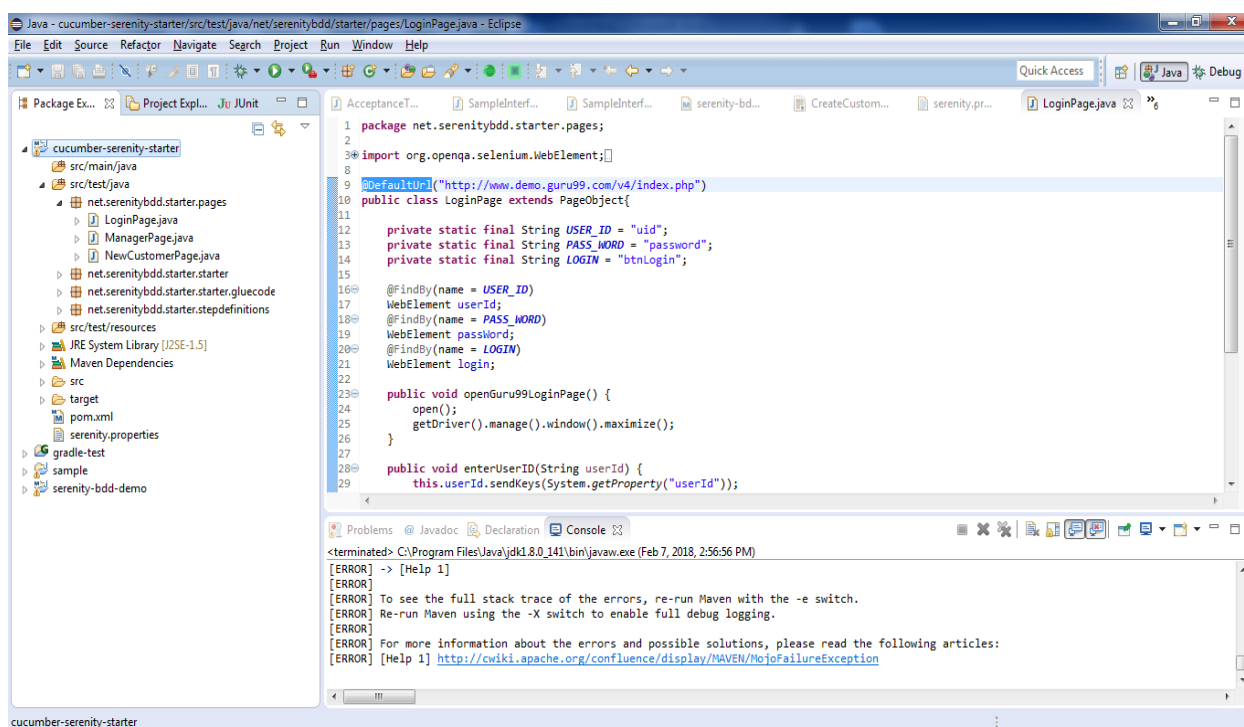

6) Then you should be able to see pom.xml with a selected checkbox in the parent window, then click Finish.

7) Then you should be able to see the project in your workspace.

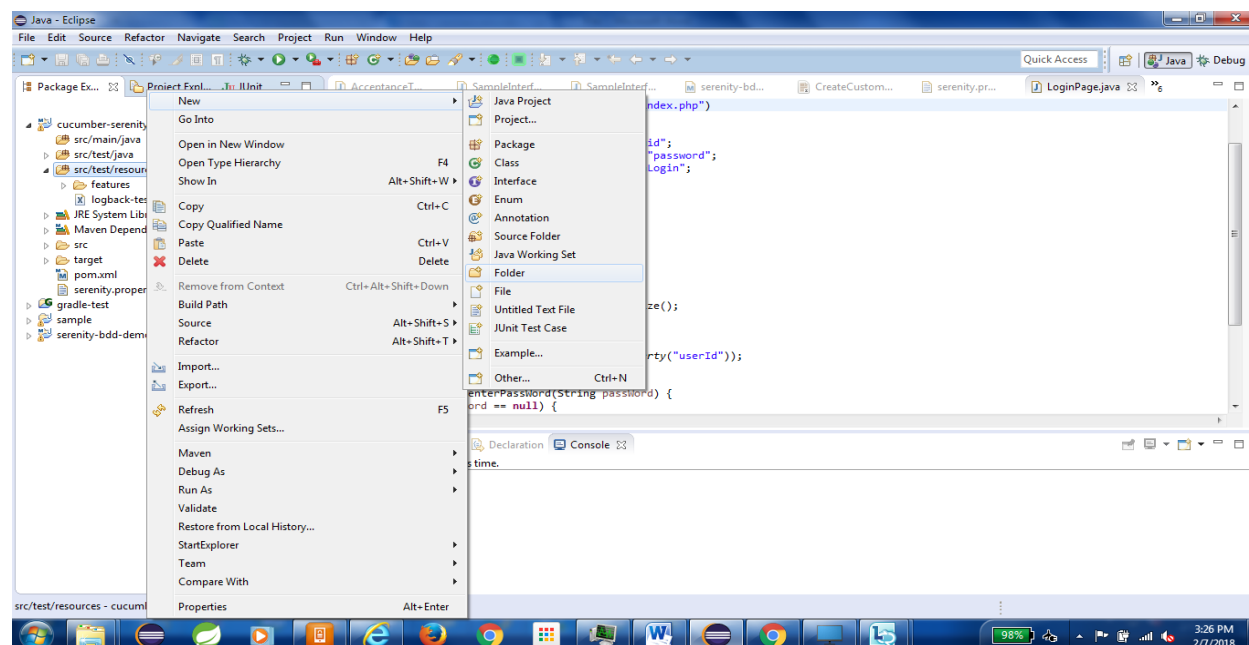

8) Open <https://chromedriver.storage.googleapis.com/index.html?path=2.33/> in your browser and download chromedriver according to your OS. Usually ours is Windows-32bit.

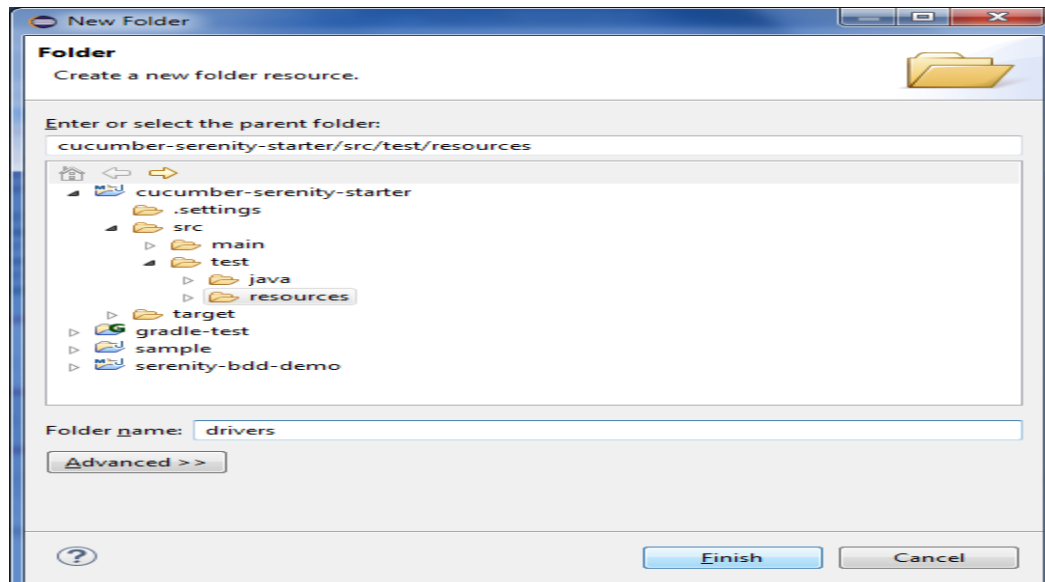

9) Right click on the downloaded folder-> Win Zip -> Extract To Here

10) Inside that folder you should be able to see chromedriver.exe. Copy it

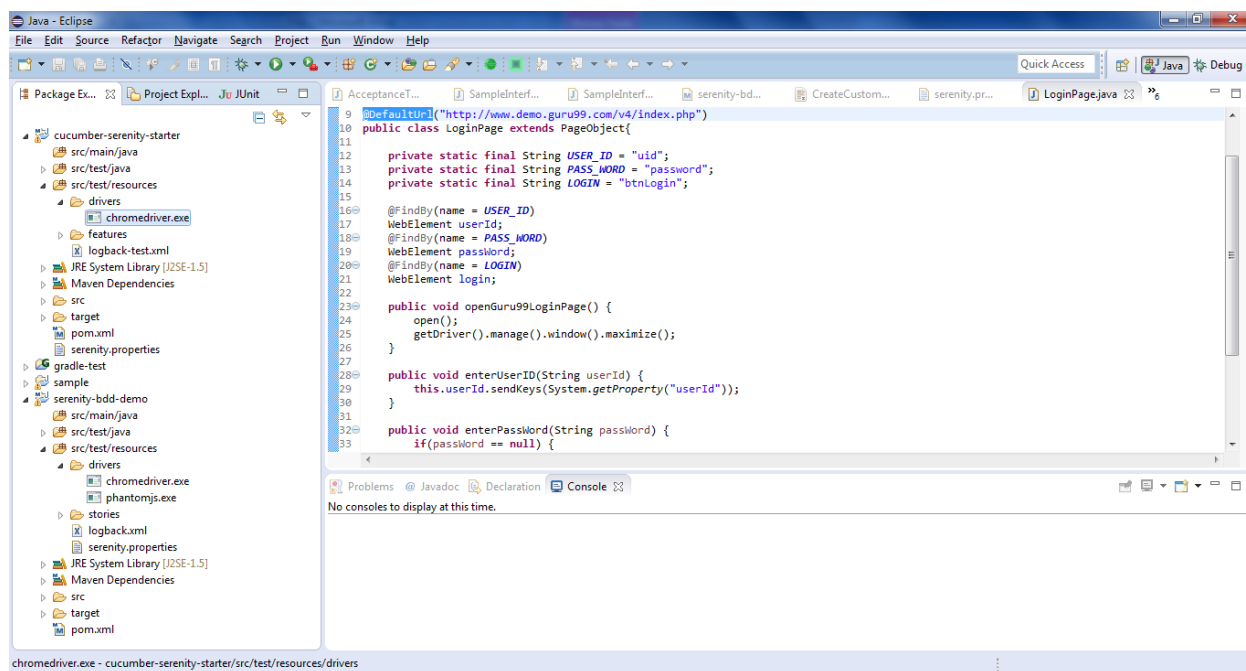

11) Go to project. Right click on "src/test/resorces" -> New -> Folder.

12) Give folder name as "drivers" and click Finish.

13) Paste the chromedriver.exe into this "drivers" folder.

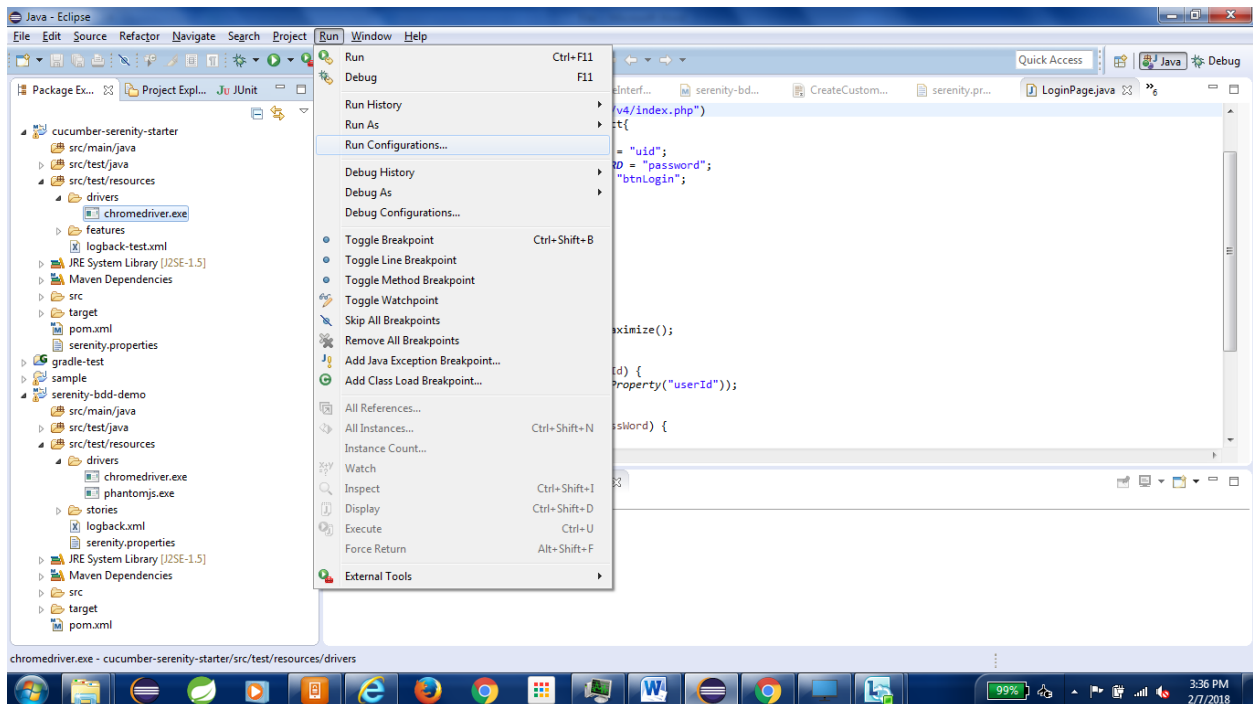

Then you are set to execute the Serenity BDD demo project.

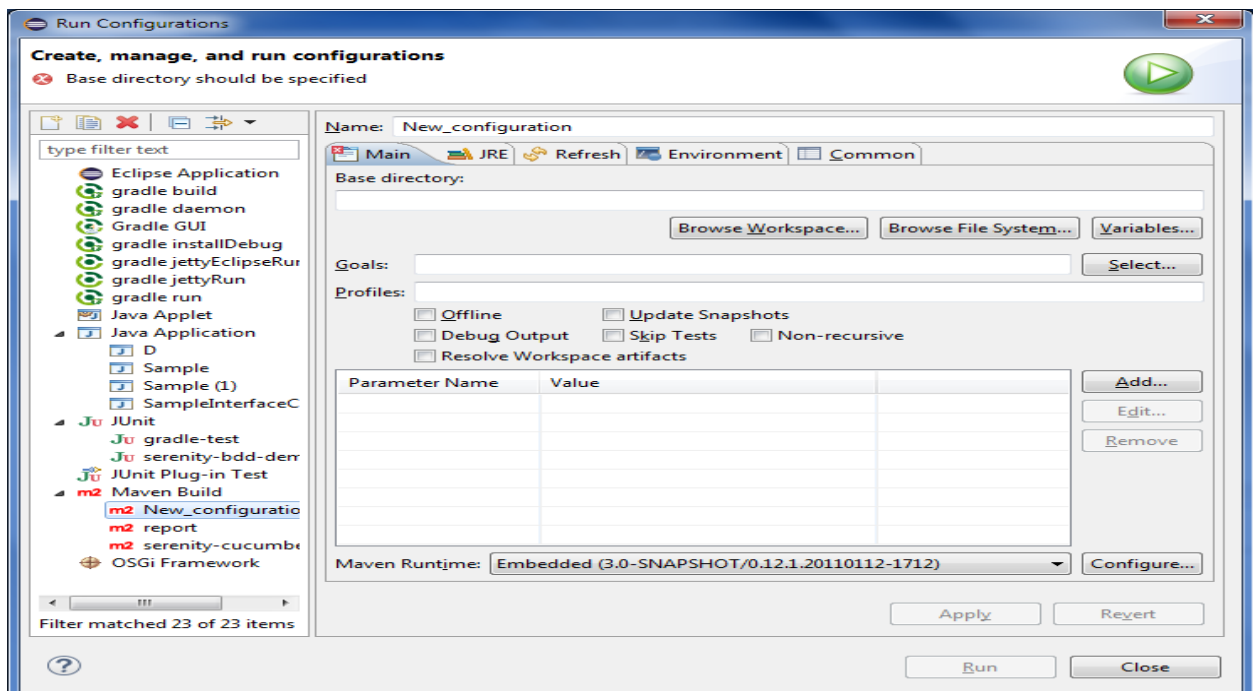

How to Run Cucumber Serenity Project

For running Cucumber Project:

1) Go to Run → Run Configurations...

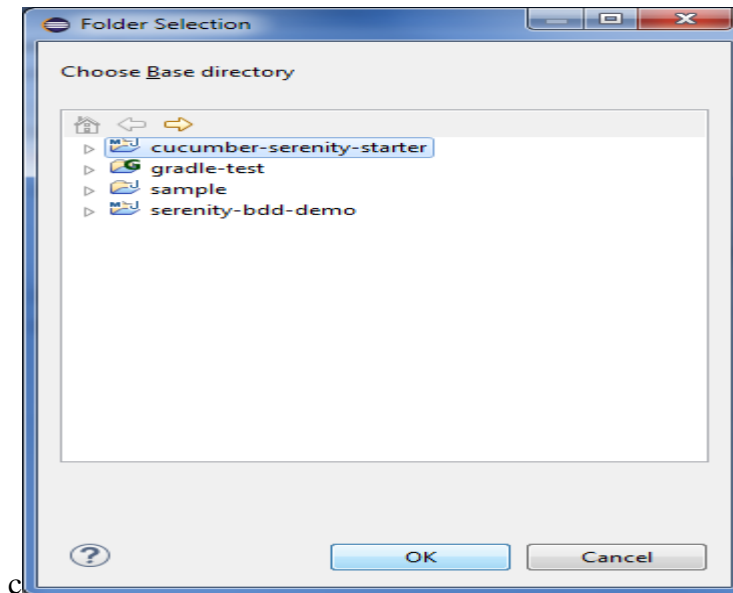

2) Double Click “Maven Build” Option

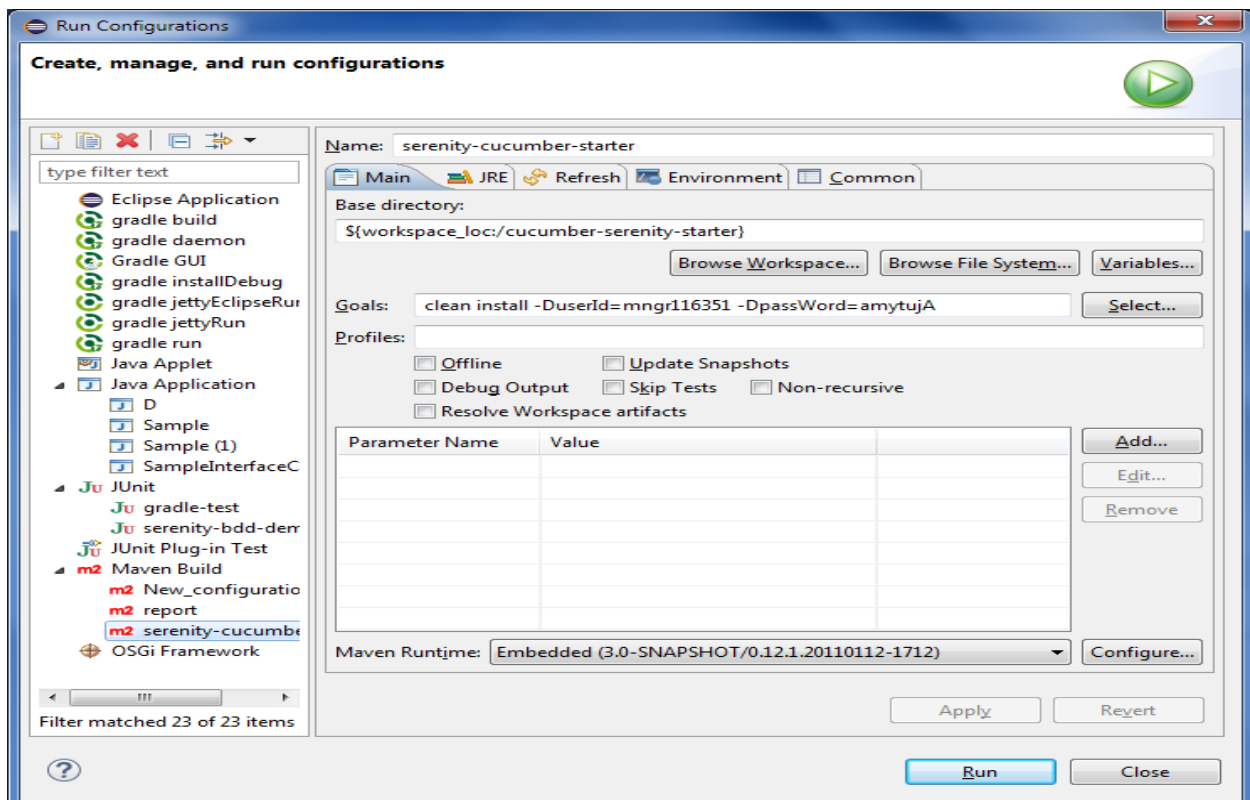

3) Give a Name to the Build

4) Click on Browse Workspace Button → Select the project and click ok

5) In the goals give “clean install -DuserId=mngr116351 -Dpassword=amytujA”

6) Then click on Apply and then click on Run.

How to See the Serenity Reports

To See the Reports for both Jbehave/Cucumber Projects:

Once the execution is success then go to → target → site → serenity

Then open index.html to see the reports.
